

Assyria Prophecy and Archaeology Converge

The Assyrian invasions of the eighth and seventh centuries B.C. represent one of the most devastating periods in the history of Israel and Judah. These invasions reshaped the political landscape of the ancient Near East and fulfilled prophetic warnings that had echoed through the ministries of Amos, Hosea, Isaiah, and Micah.

Archaeological discoveries from Assyria, Israel, and Judah now provide an extraordinary degree of historical confirmation for the biblical narrative. Inscribed stones, palace reliefs, clay tablets, and destruction layers all testify to the accuracy of Scripture's account.

Yet beyond the historical and archaeological data lies a profound theological message: God disciplines His covenant people to call them back to Himself, and even in judgment, He preserves a remnant through whom His promises endure.
