Global Watch Daily – November 11, 2026

Global Watch Daily – November 11, 2026

A concise summary of significant developments in Israel and the world through a grounded Christian worldview.

Israel & Jerusalem

South African scholar Anthea Jeffery and political analyst Benji Shulman examined how the African National Congress's electoral decline could reshape South Africa's relationship with Israel at an event marking the release of Jeffery's new book. At a separate European Jewish Association event, a Greek cabinet minister invoked the October 7 massacre in discussions about contemporary antisemitism. Meanwhile, the U.S. Department of Justice says two men were involved in several plots, including a major incident near a U.K. airbase used by U.S. forces. (JNS; JNS; BBC News)

Gadi Eisenkot, Benjamin Netanyahu's principal political rival, has the first opportunity to form a new government and replace the prime minister, according to the cited report. Separately, a group formed by Donald Trump issued an uncommon criticism of Israel while also blaming Hamas for the suffering of Gaza's civilians. (BBC News; Al Jazeera; BBC News)

The available source text identifies Al Jazeera as a source but does not provide enough detail to summarize the associated report accurately. (Al Jazeera)

Wars & Security (Israel and Region)

Hezbollah is reportedly rebuilding intelligence networks and reestablishing its presence in three southern Lebanese villages designated as pilot areas for testing the group's disarmament, despite Lebanese Army claims of operational control. The situation underscores a gap between stated state authority and the practical challenge of verifying disarmament. Separately, an attack targeted the Khor Mor gas field in Iraqi Kurdistan. In Somalia, Uganda has begun withdrawing troops from the African Union mission, while U.S. forces have left the strategic Baledogle Military Airfield; the departures could give al-Shabaab room to extend its influence. (Long War Journal; Long War Journal; Long War Journal)

Israeli forces found weapons caches and an apartment used for Hezbollah military purposes within 100 to 250 meters of United Nations positions in southern Lebanon. The

discovery adds to a documented history of Hezbollah military infrastructure near UNIFIL sites and raises questions about the security of peacekeeping positions in the area. (Long War Journal)

Lebanese authorities' seizure of a Hezbollah explosives shipment at Dahr al-Baidar highlights the test facing the government: whether it can enforce its own laws and assert state authority over the group's weapons and networks. (FDD)

A Chatham House survey found that concern about China's effect on domestic manufacturing has not diminished consumer interest in Chinese-made solar panels and electric vehicles in Europe and Canada. This points to the tension between economic-security concerns and demand for competitively priced clean-energy products. (Chatham House; Chatham House)

Global Macro & Geopolitics

China's manufacturing price competition can squeeze smaller suppliers by shifting financing burdens onto them through delayed payments, potentially weakening supply-chain resilience. In Britain, the future of the Rosebank oil field has become a test of Prime Minister Andy Burnham's approach to climate policy as he prepares to attend the COP31 summit in Turkey. The dispute reflects the strategic tension between climate commitments, domestic energy production, and the need for reliable supplies. (The Diplomat; Bloomberg)

The supplied Reuters and OSV News links do not include enough accompanying information to establish the underlying developments or their geopolitical significance. (Reuters; OSV News)

AI Dominion, Deception & the Antichrist System

The European Commission has called for Bosnia and Herzegovina to strengthen its digital identity framework, improve interoperability and align legislation with European Union standards, according to its 2026 country report. The Commission reiterated its recommendation for a single nationwide supervisory authority for electronic identification and trust services. New York is preparing to enforce its sweeping artificial intelligence safety law, requiring major developers like OpenAI and Anthropic to register, disclose safety practices, and report critical incidents or face fines (biometricupdate.com; TechCrunch).

Banks should be held responsible when fraudsters bypass identity checks conducted by third-party providers, according to 81 percent of UK consumers surveyed by digital identity company Digidentity. The research also found that 69 percent of respondents were not confident that their bank could differentiate them from an impersonator (biometricupdate.com).

Physical access control provider Sigur has integrated Iris ID's iris and facial recognition terminals into its access management platform, allowing organizations to administer biometric credentials and access permissions through Sigur's software. The integration allows administrators to manage user enrollment, biometric templates, and access rights centrally, with updates automatically distributed to Iris ID terminals at authorized access points. Yubico launched Yubi ID at the company's first Yubi Nation user conference. The new identity lifecycle platform is aimed at helping organizations manage and verify digital identities beyond the login process. The 2026 Injection Attack Detection Market Report and Buyer's Guide from Biometric Update and Goode Intelligence forecast that the number of injection attacks will grow at a compound annual growth rate of just over 57 percent, surpassing 300 million in 2028. In response, the industry is adopting standards and testing for certification to establish what counts as an effective injection attack detection (IAD) system (biometricupdate.com).

Robotics companies are investing heavily in the belief that data will solve the most difficult problems in robotics. Once artificial intelligence systems have ingested enough data from human demonstrations, the thinking goes, robots will be able to perform most of the manual tasks humans now do (IEEE Spectrum).

Pestilence & Global Health

Research on gut bacteria suggests that some microbes can consume the protective mucus lining of the intestines and produce potentially harmful compounds, while dietary fiber may help restrain this activity. Other overlooked proteins in plant foods may encourage gut bacteria to produce beneficial substances. A study of Lyme disease risk also challenges the emphasis often placed on deer: mice may play a greater role in supporting ticks, and changes in mouse populations could contribute to a 40 percent increase in tick numbers the following year. (ScienceDaily; ScienceDaily; ScienceDaily)

Researchers analyzing nearly 200,000 adults aged 65 and older found an association between receiving a high-dose influenza vaccine and a lower risk of Alzheimer's disease. The finding is observational and does not establish that the vaccine prevents Alzheimer's,

but it adds to research examining possible links between vaccination, immune health, and cognitive outcomes. (ScienceDaily)

An international team has issued coordinated guidance for personalized bacteriophage therapy, which uses viruses that target and kill specific harmful bacteria. The guidelines offer a framework for developing and administering the treatment safely as antibiotic resistance makes some infections increasingly difficult to treat. (ScienceDaily)

Natural Disasters & Signs in the Heavens

The U.S. Geological Survey recorded a magnitude 1.4 earthquake near Morgan Hill, California, and a magnitude 5.1 earthquake near the Tanimbar Islands of Indonesia. (USGS ; USGS)

The USGS also recorded a magnitude 6.4 earthquake near Lata in the Solomon Islands. A green-level forest-fire notification was issued for Australia. (USGS; GDACS)

Middle Eastern Artifacts

The Israel Antiquities Authority published two entries dated November 9, 2026, by Ofer Sion and Yehudah Rapuano. The supplied text does not describe the finds or archaeological context in enough detail to summarize their significance. (Israel Antiquities Authority; Israel Antiquities Authority)

A discussion of a new history of ancient Israel reflects on the author’s process of choosing a title. Separately, archaeologists at Saqqara reportedly rediscovered tombs of senior officials, an offering chapel, a limestone sarcophagus, and an undisturbed mummy; another excavation at Apollonia on the Rhyndacus also yielded a discovery. The provided source text does not specify further details about that find. (BiblePlaces; BiblePlaces)
